		F	bruary 7	th 192 9
Following is a report of	work done	on land under	permit describ	ed as follows:
Utsh (Sinte or Territory)	Esshi	ngton	*******	Virgin
Well No				
The well is located .2730. ft. $\begin{cases} 1 & \text{ft.} \end{cases}$	of S. line and a	2982 ft. W	of line of	sec. 12

DETAILS OF PLAN OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, camenting points, and all other important proposed work.)

On January the 17th 1929, this well was filled from its bottom to the 860 foot level with a yellow gumbo mud. At this point the hole was bridged and upon said bridge 20 sax of cement, which had been mixed to a consistency of where it would just slip out of a bailer, were dumped with a bailer. This cementing was completed on January 19th 1929.

On January the 23rd, a bailer was run and it was found that the cement had extended up to the 775 foot level therefore said plug extends from a point 7 foot below to a point of 14 foot above all the dry oil sands found in this well. From this 775 foot level to a point of 6 foot below the surface, this well was next filled with a thick yellow gumbo mud. Two of the four lengths of casing in this well were removed by unscrewing name. A regulation marker was erected and same was set in concrete.
